RISK AND REWARD PROFILE

← Potentially lower reward		Potentially higher reward →				
← Lower risk		Higher risk →				
1	2	3	4	5	6	7

The Fund is placed in Risk Group 2.

The Synthetic Indicator 1 to 7 takes into account the fluctuation of the value of the units and it shows the potential reward of investments in relation to the degree of risks inherent in the Fund. The higher the number, the higher the potential reward but the less foreseeable the reward, and investors could therefore suffer a loss. However, even the lowest number does not mean that an investment is entirely free of any risk; it rather indicates that, in comparison to higher numbers, the investment offers a lower but more foreseeable reward.

The indicator value was determined based on historical

information, which is not always a reliable guide when it comes to the future risk profile of the Fund. The risk and reward indicator is regularly re-assessed and its value can fluctuate up and down.

The risks inherent in the Fund derive, in particular, from market, currency, interest rate, credit and liquidity risks. The investors should be prepared to accept the risk of possible loss resulting from this investment or not reaching the participation certificate desired value increase. The value of investments can rise and fall. No return on such investments is guaranteed. For more information, please, see Chapter 9 of the Fund Prospectus.
